Paragon Software Group released new Drive Backup 7.0 Server Edition

Complete server disk imaging solution Drive Backup 7.0 Server is the most effective way out for company system and data safety.

September, 2005- Paragon Software Group, the European specialist for innovative data security and data management technology, launches reliable Drive Backup product, that possesses both complete back up features and other novelties in Server Backup solution.

Drive Backup Server is a step forward to server disk imaging technology. It creates an exact server image of your hard drive, reducing risks of corporate data damage or loss, system crash or downtime, saving precious time, efforts and costs. It provides a wide range of basic and advanced server backup, restore and recovery functions and abilities required to manage server based network. They all are realized in the new intuitive and convenient interface, that allows to simplify at most the management process of server drive backup offering easy solutions of advanced tasks to IT professionals and system administrators.

For companies data protection is of high priority, because information is the most valuable asset companies possess and its loss can have fatal consequences for the financial health of organization.

Paragon Drive Backup 7.0 Server provides new efficient data protection and time saving solutions:

- Real-time server disk backup: images Windows Server without interrupting its activity. Saves backup archives to local or network drive or makes them bootable and burns directly to CD/DVDs for safe and reliable restoration in case of a system malfunction.
- Backup Capsule: a unique feature of Drive Backup Server that provides the most secure place for keeping backup image on hard drive, prevents accidental deletion or unauthorized access to it.
- Dynamic disks support: works with full range dynamic volumes (simple, spanned, striped, mirrored, RAID-5).
- Quick restore at any time: performs entire system restore, a bare-metal server restore from bootable archives or just restores of required data.
- Built-in Scheduler along with Script Generator: makes a system administrator job more efficient.

Besides obtaining all these new features Paragon Drive Backup 7.0 Server also includes additional ones that make the product complex and all-embracing. Such

extra functions as partitioning, restoring the system even when the current operating system cannot boot anymore, sharing CD/DVD recordable device over the local network, browsing backup archives for separate files and folders offer the user basic features of several Paragon products in one.

Paragon Drive Backup 7.0 Server's Backup Capsule has independent system layout (separate hard disk partition), that stays operable whatever happens to active file system. Moreover, it is hidden and thus it helps to avoid an accidental removing or unauthorized access to the backup data. In such a way, this product provides much more efficiency and time saving than just copy file method because reinstallation is no more needed. A system administrator can get the system back on track in minutes, not hours or days.

“The industry focus on creating cost effective enterprise solutions”, said Natia Kartvelishvili, Marketing Director of Paragon Software Group. She continued, “Paragon Drive Backup Server is reliable tool to backup server and protect corporate data and system in any disaster case, saving a great deal of time and money for small and mid size organizations.”
