FREIBURG, Germany, July 16, 2015 – Paragon Software Group, the technology leader in data security and data management solutions, today announces the release of Paragon NTFS for Mac® 14 Preview. Paragon NTFS for Mac® 14 Preview provides full read and write access to Windows-formatted NTFS partitions on OS X. Paragon NTFS for Mac 14 Preview is available for immediate download, without registration, to all Mac enthusiasts testing Apple's OS X El Capitan Preview. All users who purchased NTFS for Mac OS X 12 will get a free upgrade to Paragon NTFS for Mac 14 when the commercial version is released.

To ensure a higher level of security, the new release by Apple delivers a new protection feature. System Integrity Protection prevents modifications to certain system files, folders and processes. This protects components on disk and at run-time, only allowing system binaries to be modified by the system installer and software updates. Code injection and runtime attachments to system binaries are no longer allowed. Paragon NTFS for Mac 14 is fully compatible with Apple's new security policy ensuring fast, hassle-free and safe access to NTFS partitions from the new Mac OS X 10.11 El Capitan Preview.

Once the program is installed, the user can get started right away: conveniently navigate contents and read, edit, copy or create files and folders. The program guarantees advanced support of NTFS file systems and provides fast and transparent read/write access to any NTFS partition under OS X 10.11 Preview. Paragon has been the leader in cross-platform storage software for 20 years, delivering proven maximum performance, stability and security for cross-platform work between Mac®, Windows® and other operating systems.

Key functions:

• Only runs with Mac OS X 10.11 El Capitan Preview.
• Ultra-quick read/write access to NTFS files in Mac OS X El Capitan.
• No limit to file or partition sizes (within NTFS and Mac OS X constraints).
• Supports special NTFS functions in Mac OS X El Capitan such as resource forks, hardlinks, symlinks and file permissions (POSIX file attribute).

- The transfer rate during file operations on NTFS partitions is just as good as it is for operations on native HFS partitions.
