Paragon Software Group at CeBIT 2005

CeBIT 2005: Paragon Software Group presents comprehensive improvements in efficiency and various novelties in data security and management technology solutions

Buggingen, February 2005

Paragon Software Group (System Utilities Division), the European specialist for innovative data security and data management technology, demonstrates at the upcoming CeBIT (March 10 to 16, 2005 - Hannover, Germany) the entire spectrum of its flexible system utilities. The highlights of the demonstrations taking place at hall 5, stand E28 include software solutions for computer data backup, partitioning, rescue and recovery; Encryption; Operating system installation; Handwriting recognition and Linux operating system extensions.

“The CeBIT naturally provides us with the opportunity to confidently demonstrate our 10 year expertise. We intend to present our extensive solution portfolio meeting not only individual customer needs, but also modern requirements of small and medium-size businesses more fully” said Konstantin Komarov, General Director of Paragon Software Group. “At the exhibition we will show powerful task oriented software solutions giving our customers full control over the process of storage maintenance and data protection while reducing data management cost and complexity”

Innovative data storage and data security solutions based on Paragon’s unique partitioning and imaging technology

Paragon Software Group(PSG) will demonstrate the next 7.x line of its leading software solutions: Paragon Partition Manager; Paragon Drive Backup, Paragon System Recovery and Paragon Hard Disk Manager with new enhancements especially designed to meet requirements of the full range of corporate and home needs from small and medium sized companies to end-users. A full script-based deployment solution especially developed for system assemblers and value-added resellers will be shown.

Furthermore, PSG introduces Paragon Exact Image, the new software solution enhanced with advanced wizards, which ease complete system backup and disk cloning procedures, providing simple and convenient interface in a step-by step performance. A home user of any level will be impressed with this excellent combination of a professional competence and high cost efficiency.

Unique data management solution for multiple boot configurations

Paragon Software Group (PSG) has developed its own cross-platform drivers for accessing different file systems with Read-Write rights under DOS, Linux and Windows. This enables professionals and companies access and transfer data independently of operating systems restrictions. This Universal File System Driver (UFSD) technology will be presented in "NTFS for Linux" and "Ext2FS Anywhere"

The Paragon Software solutions support the entire spectrum of operating systems ranging from DOS, Windows® 9x, ME, 2000, NT, XP, Professional, Server and Advanced Server to Linux.

The press has the opportunity to receive detailed information about the mentioned technologies and applications. The technical experts of Paragon Software Group will be glad to pass over all the details during one-to-one meeting at CeBIT 2005
