

# Deployment Manager 7.0

# System Recovery 7.0

## Key-Features

- Safely and easily maintain all kinds of regular or critical system and data deployment, imaging, remote control and distribution tasks over a network regardless of architectural complexities and state of environment.
- Gain complete optimization capabilities throughout enterprise network with the most powerful deployment management solutions.

Paragon Deployment and Recovery Solutions boost your business and guarantee a value added service to capture the market.

Paragon offers its technologies to existing and prospective partners by understanding the needs of today's market. It covers the complete range of B2B relationships with a wide range of approaches and in various technological application levels.

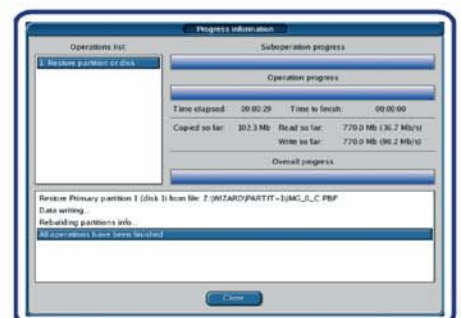

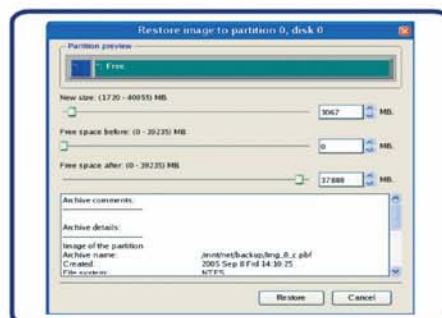

### Deployment Manager

Deployment Solutions consist of tools for powerful enterprise-wide deployment and remote maintenance. The System Administrator can deploy entire operating systems, application packages, hot fixes and custom settings without the necessity of accessing every single PC.

### System Recovery

System Recovery Solutions guard the systems of your clients.

**Paragon System Recovery 7.0** makes it possible for every PC - user, despite of his experience, to restore the operating system with a single mouse click. No time consuming re-installations, software configurations or other tasks are necessary.

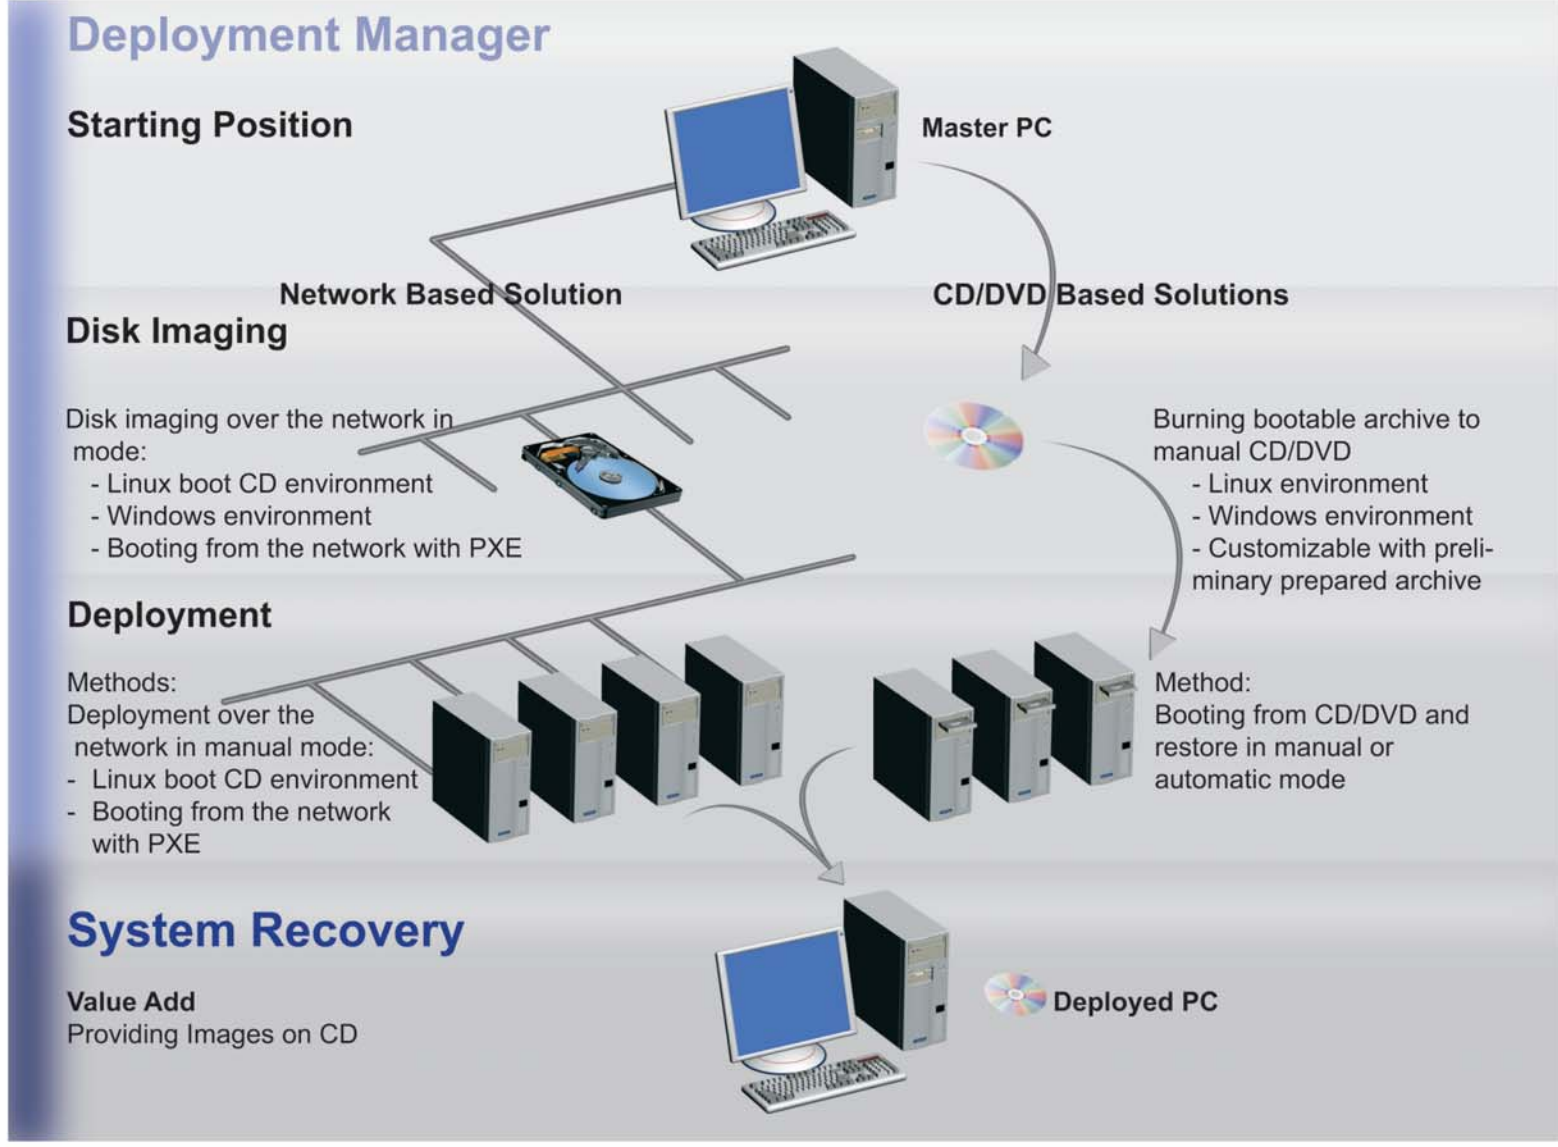

**Major benefits and key features of Paragon Deployment Manager include:**

- PXE technology involved - completely remote operation even for new clean computers
- Software/patch distribution together with full image distribution
- Integration with existing Active Directory
- Full control of all workstations from one administration console
- UFSD technology developed - access every file system from any operating system - for example, to apply custom patches and make post configuration
- Based on disk imaging technology:
  - fully scriptable hard disk management operations
  - superior performance
  - possibility to perform custom remote maintenance:
    - from repartitioning and backup
    - to defragmentation

**Major benefits and key features of Paragon System Recovery include:**

- System independent proceedings: BIOS, DOS, Linux, Windows, WinPE
- Supports storage for HDD-based Solution: IDE, SATA, SCSI, FireWire, USB for CD-based Solution: CD-R/RW, DVD R/RW
- Backup Capsule - protected special partition on the HDD
- Booting from: CD/DVD, HDD, USB Sticker, Network (PXE)
- Integration into production cycle (Sysprep)
- Customizable, scriptable solution to be integrated with customers procedure like 'BIOS Flash update' etc.
- Superior performance to reduce service costs and downtime
- Microsoft recommended
