

Paragon Disk Wiper Business delivers secure data wiping and irreversibly destroys all on-disk information (on SSDs as well). The product performs full data sanitization and adheres to the most stringent data security standards.

Disk Wiper in a nutshell

- Permanently delete data from any type of storage media
- Wipe SSDs without affecting their operating life
- Clear free space and destroy any remnants of deleted files / directories
- Choose from 10 different data erasure algorithms

Who benefits?

Enterprises, governmental agencies, military organizations – any entities dealing with classified or confidential data.

What's inside?

Immunity to data recovery utilities

Paragon Disk Wiper Business will keep your sensitive information safe from discovery. The product overwrites all on-disk sectors with random patterns. A device that has been sanitized with Paragon Disk Wiper will have no usable data remaining on it, and **even advanced forensic tools will not ever be able to recover it.**

Military-grade wiping algorithms

- US DoD 5220.22-M
- US Navy standards NAVSO P-5239-26
- British HMG Infosec Standard No. 5
- German VSiTR Standard
- Australian ASCI 33
- Russian GOST R 50739-95
- Peter Gutmann's algorithm
- Bruce Schneier's algorithm

Note! Military and government standards always require 100 percent residual data verification. It is necessary to make sure that the operation has been properly accomplished. Corrupted sectors are to be logged to keep the user informed since these sectors may also contain classified information.

Paragon Wiping Medium

Disk Wiper enables the user to create bootable media on a CD/DVD/flash that can later be used to boot and irreversibly destroy on-disk data. You can also use it to save data from partitions of your hard disk directly to compact discs or burn ISO images. The utility supports CD-R/RW, DVD-R/RW, DVD+R/RW, DVD-R, DVD+R double layer and Blu-ray and it can handle multi-session burning.

Wiping SSD (Solid State Drive)

Existing disk sanitization techniques originally used for HDDs won't work on SSDs. Reliable SSD sanitization requires built-in, verifiable sanitize operations. The unique functionality in Paragon Disk Wiper Business ensures irreversible and secure data destruction on SSD storage devices without shortening the SSD's service life.
